Venus

I know a planet. It is second from the sun.

It's Venus!

It has no ozone, and it doesn't have a moon.

It's Venus!

What's the planet that gets so hot that
you could cook your dinner there?

Water would just boil and evaporate,
so there's no water anywhere.

It's Venus, yeah!

I know what's called the sister planet of the Earth.

It's Venus!

Named for the Roman Goddess of beauty and love.

It's Venus!

243 days on Earth equals one day there.

Nothing could survive,
so there's no life anywhere.

It's Venus, yeah!

I know a planet with extreme greenhouse effect.

It's Venus!

Its temperature is over 400 degrees.

It's Venus!

90% of Earth's gravity,
you'd weigh almost the same there.

Mostly plains with mountains
and volcanoes everywhere.

It's Venus, yeah!
